DETAILED ACTION

Claims 1-17 are pending in the instant application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C.
 121:

- I. Claims 1, 4-7, 10, and 13, drawn a composition of an isolated DNA molecule that conprises a fragment of human genomic DNA, classified in class 514, subclass 44.
- II. Claims 2, 8, 11, 14, and 16, drawn to a method of in vivo gene therapy by administering a subject a composition of an isolated DNA molecule that comprises a fragment of human genomic DNA, classified in class 514, subclass 44.
- III. Claims 3, 9, 12, 15, and 17, drawn to a method of ex vivo gene therapy by administering a subject a composition of tumor cells transformed with a composition of an isolated DNA molecule that comprises a fragment of human genomic DNA, classified in class 424, subclass 93.1.
- 2. The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in MPEP 806.05 for inventive groups that are directed to <u>different</u> methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons:

The inventions of groups II and III are patentably different methods. The invention of group II is drawn to a method of in vivo gene therapy whereas the invention of group III is drawn to an ex vivo method of gene therapy wherein tumor cells are transduced in vitro and then administered to a subject. It is noted that these are two different uses of the composition of the genomic sequence. In addition, the steps of the method of the ex vivo therapy and in vivo therapy are

Art Unit: 1632

also different, for example, routes of administration of cells are different than those of administering nucleic acid.

The Invention of the group I is related to groups II and III as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h). The invention of group I is drawn to composition of an isolated DNA molecule that comprises a fragment of human genomic DNA and it can be used in different processes, for example, in producing recombinant protein in cell culture, in vivo or ex vivo methods of therapy, as probes for hybridization etc.

- 3. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art shown by their different classification and their recognized divergent subject matter, and because each invention requires a separate, non-coextensive search, restriction for examination purposes as indicated is proper.
- 4. A telephone call was made to Allen Yun on 3-6-01 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicants are advised to submit a clean version of each amended claim (without underlining and bracketing) according to \S 1.121(c). For instruction,
